

Project proposal

Project name: Money management

Project description:

-This program will get input from users to calculate amount of money that the users need to save per day or week, depend on the user to choose.

-Users need to put information about their income, expenses, and price of things that they want to buyer calculate days and money that they have to save for buying those items.

-Users can put the list of what they want to buy and when they want to buy it, and if they change number of days and the items to the list, the program will recalculate and give a new value of saving.
